

How to Make Snow Lantern

Rent a bucket and shovel and make snow lanterns to light up Miyama's thatched village!

1

Pack snow in a bucket

2

Press down on the snow to pack it consistently to create a solid block of snow

If the snow is not pressed enough, the snow lantern gets collapsed.

3

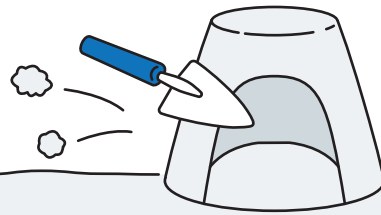

Flip over the bucket and pull the bucket up

4

Dig a hole with shovel

The bigger hole will be better to place a candle inside.

5

Place your candle and lit the fire.

Note

Return bucket and shovel after use.

Do not make snow lanterns in areas where there is a risk of falling snow or falling.

Make your snowlantern in the designated area.
